

# Shared/Synced folders

---

## Version 1

---

```
Vagrant::Config.run do |config|  
  config.vm.share_folder "1", "2", "3"  
end
```

- 1 => use v-root or vagrant-root if you want to override the default settings. Else, use any name
- 2 => path where the folder will exist in the guest machine
- 3 => relative path to an already existing folder in the host machine that needs to be mapped with the shared folder of the guest machine

## Version 2

---

```
Vagrant.configure("2") do |config|  
  config.vm.synced_folder "1", "2"  
end
```

- 1 => absolute path of an already existing folder in the host machine that needs to be mapped with the shared folder of the guest machine
- 2 => path where the folder will exist in the guest machine
